[How to Create a Selfie Drone Women Will Love](#)

Drone businesses looking to attract women to their products are getting creative with the features and design solutions they're offering today. Take, for instance, the [Kimon selfie drone](#), which was recently launched with women as the target audience. First, it's got some great colors and a cute profile. It can record video, take pictures, and is controlled

Drone businesses looking to attract women to their products are getting creative with the features and design solutions they're offering today. Take, for instance, the [Kimon selfie drone](#), which was recently launched with women as the target audience.

First, it's got some great colors and a cute profile. It can record video, take pictures, and is controlled by your mobile phone which makes it very versatile. But perhaps even more attractive to women is the fact that it can be used indoors – a great feature for moms looking to capture images of their little ones at play.

Here are the specs:

- 16 million pixels and support for 4k/25fps video recording at most, which are the best among competitions;
- Simple, smartphone-controlled operation with one-touch start-up/take-off/hovering/landing/return;
- G-sensor-controlled by moving your mobile phone;
- Multiple shooting mode that support photography/video recording/burst mode/slow motion/time-lapse photography, creating highly personalized selfie.
- Five selfie-taking modes: 360-degree panorama, 45-degree shot, follow shot, panoramic selfie and standard selfie.
- Indoor positioning module that enables easy selfie-taking under 3-meter high hovering in an indoor environment without GPS signals.

This looks like a great little drone that could be useful for vacations, play dates, and soccer games with the kids.

For more details of this \$399 drone, take a look at this promotional video. And check back here soon for a potential podcast interview with someone from Keyshare technology, the creator of this selfie drone.
